

retrieving license information of the client computing system from a license database located on a remote server;

receiving a selection of a configuration of the retrieved license information;

confirming the configuration of the retrieved license information on the client computing system; and

receiving one of a license file relating to the confirmed configuration of the retrieved license information and an error message.

3. (Amended) The method according to claim 1, further comprising the step of:

requiring an affirmative permission of the client computer system before retrieval of license information from the license database.

4. (Amended) The method according to claim 1, further comprising the step of:

determining whether a flexible license management utility software is installed on the client computing system, and installing the flexible license management utility software on the client computing system if the flexible license management utility software is determined as not being installed on the client computing system.

6. (Amended) The method according to claim 1, further comprising the step of:

updating the license database based on the configuration of the retrieved license information.

7. (Amended) The method according to claim 1, further comprising providing at least one license installation option on the client computing system;

wherein the at least one license installation option includes at least one of:

a full license installation;

a program group installation; and

a floating license installation.

9. (Amended) The method according to claim 1, further comprising the step of:

determining an operating system of the client computing system.

10. (Amended) The method according to claim 9, further comprising the step of:

configuring the operating system of the client computing system for the automated license installation by setting an environment variable of the operating system.

11. (Amended) The method according to claim 1, further comprising the steps of:

determining whether a previously installed license file is valid; and

performing one of an updating operation and a replacement operation with respect to the previously installed license file.

12. (Amended) The method according to claim 11, further comprising the step of:

querying the client computing system on whether one of the updating operation and the replacement operation is to be performed with respect to the previously installed license file.

13. (Amended) The method according to claim 1, further comprising the step of:

determining if a network connection exists to the client computing system.

17. (Amended) A system for managing an automated license installation on a client computing system comprising:

a setup program which resides on the client computing system, the setup program configured to send post requests containing user information using hypertext transfer protocol (HTTP) over a network to an HTTP port;

a tunneling agent which resides on a remote server system accessible via the network and having the HTTP port and a firewall, the tunneling agent configured to receive the post requests from the HTTP port;

an automated license daemon program which resides on the remote server system, the automated license daemon configured to receive the user information from the tunneling agent; and

a first database which resides on the remote server system and on which is stored license information and a license file, the first database configured to receive a request from the automated license daemon program and return a reply, the reply including one of the license information, the license file and an error message;

wherein the automated license daemon is further configured to send a reply HTTP message based on the reply to the setup program over the network using the HTTP port.

22. (Amended) The system according to claim 17, wherein the setup program is further configured to install the license file on the client computing systems when the setup program receives the license file.

24. (Amended) The system according to claim 17, further comprising:

a second database on which resides a master copy of the license information and license file from which an extract is made and becomes the source for the first database.

25. (Amended) The system according to claim 24, wherein the information on the second database and the first database are updated independently and then synchronized.

Please add the following new claims:

39. (New) The method of claim 1, further comprising sending a message requesting license information

40. (New) The method of claim 39, wherein the message includes at least one of a host ID, license number, and request code.

41. (New) The method of claim 1, wherein the retrieved license information includes at least one of available licensed products, host ID information, port number information, number of licenses available and number of licenses currently installed.
